Education

Degree	Institute/Board	CGPA/Percentage	Year
Bachelor of Technology	COEP Technological University	7.98/10 (Current)	2023 - 2027 (Expected)
Senior Secondary	Maharashtra Vidyalaya Barshi	80.33%	2023
Secondary	Maharashtra Vidyalaya Barshi	96.00%	2021

Projects

- **Tradr – Crypto Social Trading Platform** *Mar 2026 - Present*
  Self Guided **GitHub**
  - Architected a **full-stack social trading platform** using **Node.js, Express, PostgreSQL** and **Prisma ORM**, featuring a complete REST API with **JWT auth** via HttpOnly cookies.
  - Engineered core social features including **follows, posts, likes, comments** and **bookmarks** alongside trade tracking with **P&L finalization** using atomic Prisma transactions.
  - Implemented a **real-time Binance WebSocket** price caching architecture with in-memory storage to support live crypto price feeds without per-tick DB writes.
  - Developed a fully functional **React** frontend with **React Router** and **Tailwind CSS**, integrating **Cloudinary** for media uploads and **Axios** for API communication.
- **LiveWeb – Web-Based Live Code Editor** *Oct 2025 - Nov 2025*
  Self Guided **Github**
  - Built a browser-based **HTML/CSS/JavaScript** live **code editor** using React with real-time preview via **sandbox iframe execution**.
  - Integrated **Monaco Editor** to provide VS Code like syntax highlighting, autocomplete and IntelliSense.
  - Implemented custom console and error handling by capturing iframe runtime logs and displaying within the application UI.
  - Enabled persistent editor state using **LocalStorage** and deployed the application on **Vercel**.
- **Drowsiness Detection - Deep Learning , CNN** *Mar 2025 - Apr 2025*
  Guide : Dr. Deeplakshmi Niture / COEP Tech
  - Designed and engineered a real-time drowsiness detection system using **Convolutional Neural Network (CNN)** with **transfer learning**, achieving **95% accuracy** on a custom-labeled dataset of eye-state images.
  - Integrated the trained **CNN model** with **OpenCV** to perform real-time inference on live video streams for eye-state classification.
  - Executed **Arduino**-based alert mechanisms to trigger buzzer notifications upon drowsiness detection, simulating an embedded driver assistance application.

Technical Skills

- **Competitive Programming:**
  1. **CodeChef: 3*Star** rated coder with **1733**(Max) rating points. [handle **Turaka**]
  2. **LeetCode: Knight badge holder**, ranked in the top **5%** globally. [handle **Turaka**]
- **Programming Languages**: C/C++, JavaScript, Python
- **Frameworks & Libraries**: React.js, Node.js, Express.js, Tailwind CSS, Prisma, Scikit-Learn, OpenCV
- **Databases**: PostgreSQL, MongoDB
- **Tools & Platforms**: Git, Cloudinary, Vercel, Arduino

Key courses taken

- **Computer Science Courses**: Data Structure & Algorithms, Object Oriented Programming, DBMS, Operating System
- **Data Science Courses**: Foundation in Machine Learning and Deep Learning

Achievements

- **MHT-CET Examination**, Ranked **AIR 958** among 500,000+ candidates (Top 0.2%) *2023*
- **LeetCode Biweekly contest 175**, Attained **1110 rank**, among more than 41,000 participants. *2026*
- **Meta Hackercup**, Ranked **2100** globally in **Round 2** of competition. *2025*
- **CodeChef Starters 157**, Secured rank **171** among **30,000**+ participants. *2024*
